

Bot detection

Every attacker challenged,
every human allowed.

FOR

Teams with a login form

BY

The fp-research lab

THE ASK

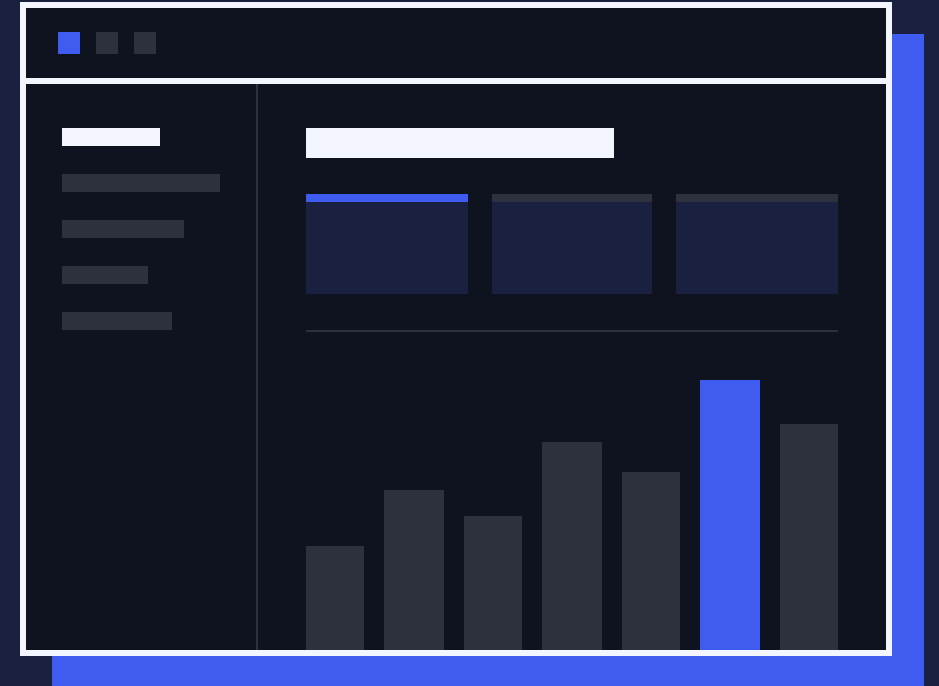

One pilot, your form

A form cannot tell a person from a script.

Fake sessions get in, real people get stopped, and every miss costs trust.

One fused score for every session, five layers behind it.

Network, script, automation, behavior and agent signals fuse into one number. Allow or challenge follows by rule.

Three steps, measured on our own targets.

1

Run it on your own flow

The same scorer runs on the social, store and login flows.

2

Fuse five layers

Each layer votes allow, slow, challenge, block or unknown.

3

Decide by rule

One layer alone can raise a challenge, never a block.

Measured in the lab, 4 October 2026.

100/100

attacker runs challenged or
blocked

0.0%

scripted humans wrongly
challenged

0.20ms

scoreboard.md 2026-10-04 · 3 own targets · 6 classes A0-A5 · findings/arms-race.md

A pilot on one of your forms.

You pick the form. We measure, score and report. The rules and the data stay with you.

WHAT YOU GET

- ✓ Measure on your own targets
- ✓ A verdict for every session
- ✓ A written report with every number

A lab that attacks and defends its own sites.

Six attacker classes and scripted humans run against our own targets. Every claim in this deck comes from that scoreboard.

3

own targets live

6

attacker classes, A0 to A5

5

scripted-human sessions

Give us one form for a pilot.

You hold the report with every number, then you decide.
